Add JWT access and refresh token authorization

In progress

Backend

Description

Keep Google OAuth on the confidential backend client.

Issue short-lived access tokens and rotating refresh tokens.

Acceptance criteria

- v

Refresh tokens and client secret never reach browser JavaScript
- v

Authentication remains independent from richer product sessions
- v

Protected routes return 401 without a valid access token

Create issue

In progress

Zhitong product workspace

A focused task system for teams that want speed without losing context.

Project description

Build a fast, team-scoped issue workspace with clear ownership, dependable authentication, and enough project context for product, engineering, and design to plan the same release.

Product brief

Objectives & success criteria

Ship the complete issue workflow for Team 1

Keep protected API requests below 300 ms p95

Reach 90% milestone completion before launch

Latest project update

Aug 2 - Authentication foundations are complete.

JWT access and refresh flows passed backend validation.

Next: finish the issue activity timeline and summary filters.

GitHub integration

Workspace / Zhitong / Applications / GitHub

GitHub
Connected to wangd606 via GitHub App
PR webhooks are syncing normally / Last event 2 min ago

Connected

Manage

Automatic pull request linking

Always on

No repository, project, or team mapping is required.

A PR links automatically when its title contains an exact workspace item key.

PR TITLE

[KEY-31] Keep refresh tokens in the server-side BFF
Detected exact item key: KEY-31

MATCH RULE

PR title only	Pattern	KEY-[number]	Result	Link PR under the item's Development section
---------------	---------	--------------	--------	--

Link lifecycle

PR opened or title edited

>

Find item by title key

>

Attach PR and sync status

Titles without an exact item key stay unlinked. Branch names are not inspected.
